

## ACCIDENTAL SPRINKLER ACTIVATION CREATES HAVOC FOR STORAGE COMPANIES

### Shutgun is the Must Have Tool for Protecting Valuable Assets

(BONDITA SPRINGS, FL) May 16, 2016\_ Storage facilities provide peace of mind for business clients who need to secure sensitive documents – from confidential files to electronic data. Fire detection and suppression systems ensure that these valued records are protected from the devastation of fire. However; fire suppressive systems open up the potential for damage from accidental sprinkler discharge. This is why Technicraft Product Design Inc. will be introducing its latest line of fire sprinkler shut off products at the **Prism 2016 Annual Conference from May 16 to 19, 2016 – booth # 506.**

“Damage from accidental fire sprinkler activations is one of the most costly challenges facing storage facilities today,” said Shutgun President, Greg Patterson. “Record and information management facilities can now put their clients at ease by keeping a Shutgun tool with every fire extinguisher.”

When a sprinkler head is accidently activated, dirty stagnant water is released at pressures as high as 165 psi and up to 75 gallons per minute. The durable cast aluminum Shutgun allows the user to shut off an active sprinkler head in seconds with a one-handed, squeeze. Fast shut off is critical to prevent extensive damage to valuable documents and records.

“The Shutgun is insurance for the professional record and information management facilities and it has proven its value in real life situations,” said Patterson.
